

Filtered Noise Plugs

Calibrated Flat Response Noise Plugs For Musicians

Any loud sound, including music, can cause irreversible damage to your hearing. If you are exposed to 85dB+ sound levels for long periods, you could benefit from using noise protection.

Musicians who perform regularly, or play in high volume surroundings, such as rock or metal music, can benefit from using filtered noise plugs. Not only will they protect your hearing, they will bring the overall sound level down without losing the tone or feel of the on-stage sound.

Elacin ER custom-made noise plugs feature an individually calibrated filter (9, 15 or 25dB), designed to attenuate all frequencies at the same level. Unlike solid noise plugs which attenuate all frequencies differently, these filtered ear plugs give a flat attenuation across the frequency range. This means ER noise plugs let you hear sounds accurately, but at a safe and comfortable level for your environment.

Colour Options

The standard colour for Elacin ER Noise Plugs is clear. Beige, blue, yellow, red or black are also available as optional colours.

Filters come in clear as standard, with beige and red as optional colours.

ER Earphones

Turn your ER into an IEM

ER noise plugs can also be combined with the ER Earphone in-ear monitors. Ideal if you regularly visit concerts and also listen to your favourite music comfortably at home on your MP3 player. The ER noise filter ensures good protection against noise that is too loud and, when you replace the filter with an earphone, it turns into a high quality in-ear monitor system with the benefits of custom-made earpieces. Also ideal for DJs who use one noise plug and one in-ear monitor at a time.

Give Your Performance The Edge

Puretone take hearing very seriously. Since 1976 we have been manufacturing custom-made earpieces and other hearing products that enhance and protect your hearing.

Our skilled team of professionals are experts at creating a custom-made earpiece that is right for you, whether you are a serious musician, club DJ, gig goer or dedicated music listener.

Whatever your music or noise protection needs, Puretone can manufacturer and supply the right product for you.

Micro Monitor Classic

The Top Choice For Professional Musicians

Custom Micro Monitor Classic by Puretone offer exceptional sound quality, response and reliability with the fit and comfort that only custom-molded earpieces can provide. Being anatomically moulded to the shape of the user's ear, these monitors help to eliminate feedback, lower onstage noise levels and reduce vocal fatigue.

Micro Monitor Classic are available in 3 models:

- **Classic 1** features a single driver for excellent performance at a cost-effective price.
- **Classic 2** features dual balanced armature drivers with passive crossover circuitry.
- **Classic 3** features a triple driver system with a dual passive crossover for the ultimate in performance and sound quality.

Unique Sculptured
Cosmetic Finish

Available as a option on all our Micro Monitor Classics, the new Sculptured Cosmetic Finish gives a more discreet, flush shape to the earpiece compared to the standard Micro Monitor shape.

Micro Monitor Flex

One-Piece, Custom-Made In-Ear Monitors

Custom-made Micro Monitor Flex are manufactured from soft flexible silicone material to give excellent comfort over long durations. These monitors create an acoustic seal in the ear, lowering noise and providing improved bass response, allowing the true sound of your instrument to be heard over the sound of the overall mix.

Micro Monitor Flex are available in 3 models:

- **Flex 1** features a single driver for excellent performance at a cost-effective price.
- **Flex 2** features dual balanced armature drivers with passive crossover circuitry.
- **Flex 3** features a triple driver system with a dual passive crossover for the ultimate in performance and sound quality.

Micro Monitor Flex feature a fixed cable with 3.5mm jack plug. They also feature the new miniature user-replaceable wax guard system, to make cleaning and maintenance easy. Ideal for any musicians that needs an ultra comfortable monitor experience on stage.

Personal Moulds

Acrylic & Silicone Earmoulds For Earphones

Personal Moulds

Aimed at the amateur or semi-pro musician, these custom-made moulds offer a cost-effective way of achieving professional results.

Personal moulds are simply fitted over any driver of your choice, creating a seal which increases low frequency response and improves attenuation.

Available in acrylic or silicone material, in a wide range of colours, these earpieces are the ultimate personalisation for the serious music listener. Ideal for anyone who wants to enjoy music to the maximum, or the musician who wants a cost-effective, custom-made in-ear monitoring solution for the stage and studio.

Colour Options

All custom-made earpieces are available in a range of colours, depending on the type of material used. Acrylic material is generally harder and more rigid and flexes less in the ear than silicone material. Acrylic moulds are also available with a sparkle glitter finish to make the earpieces really stand out.

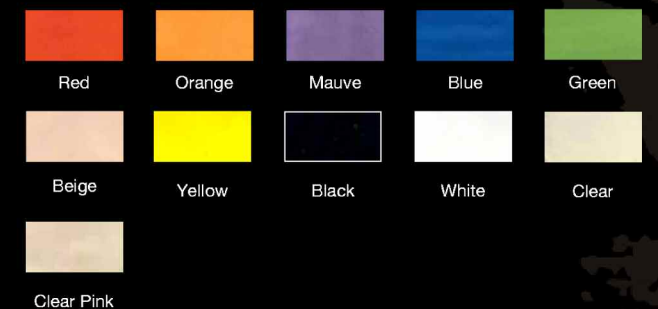

Acrylic Colour Options

These 19 acrylic colour finishes are available for Micro Monitor Classic and Acrylic Personal Moulds.

Silicone Colour Options

These 11 silicone colour finishes are available for Micro Monitor Flex and Silicone Personal Moulds.

Please Note: Micro Monitor Flex 3 is only available in clear silicone
